

Pisces Cruise 06
GIS Data and Products
Read Me

Data collected during Pisces Cruise 06 were transformed to Geographic Information System (GIS) formatted shapefiles for on-scene analysis and decision support. Station locations and subsurface plume information were mapped using ESRI ArcGIS projects. This folder contains the original data and documentation provided by the ship to the Sub-surface Monitoring Unit. Information in the folders is identified:

Charts, Graphs, Maps, Plots – this folder contains finished copies of maps resulting from the ArcMap software. Additional files are These are provided in *.jpg, *.tiff and *.pdf formats.

GIS_Data – this folder contains the ESRI project files (*.mxd) created on scene, as well as the supporting data provided by the ship to the SMU post-cruise. This may include the raw station location data (spreadsheets) some shapefiles and any other ancillary data provided by the ship to support the GIS presentation and analysis.
